

Digital Literacy Project Report

Name: Siddhartha Singh Sikarwar

Registration Number: 25BCE10784

Course: CSE0001 – Digital Literacy

University: VIT Bhopal University

Year: 1st Year

Introduction

This project was carried out as part of the Digital Literacy course with the aim of understanding the importance of digital skills in a student's academic and professional life. As part of the role of a Student Digital Ambassador, the project focused on building awareness about digital tools, communication practices, online presence, and cybersecurity.

The project consisted of five tasks, each designed to provide practical exposure to different aspects of digital literacy. Through these tasks, I was able to explore various platforms and understand how they are used in real-world scenarios.

Task 1 – Digital Literacy Infographic

For this task, I created an infographic using Canva to explain the concept of digital literacy. The infographic covered topics such as basic digital tools, safe internet practices, and email etiquette. The main objective was to present information in a clear and visually engaging way so that it is easy for others to understand.

While working on this, I focused on keeping the design simple and avoiding too much text. One challenge I faced was selecting the most relevant information without overcrowding the design. This task helped me understand how visual communication plays an important role in sharing information effectively.

Task 2 – Student Digital Portfolio

In this task, I created and updated my profiles on platforms like GitHub and LinkedIn. These platforms are widely used for building a professional identity and showcasing skills.

On GitHub, I explored how repositories work and how projects can be managed. On LinkedIn, I added my educational details to begin building a professional profile. This

task gave me a basic understanding of how these platforms can be useful for internships and future opportunities.

Task 3 – Coding & Collaboration Platforms

For this task, I explored both coding and collaboration tools. I completed a beginner-level problem on HackerRank to understand how coding platforms work and how problems are structured.

In addition to that, I created a Google Form consisting of five questions related to digital literacy. I also observed how responses are collected and stored in a linked Google Sheet. This part of the task helped me understand how collaboration tools can be used for surveys, quizzes, and data collection.

Task 4 – Email Etiquette & Communication

In this task, I wrote two professional emails. The first email was a request for an assignment extension, and the second was an email expressing interest in an internship opportunity. Both emails were structured with proper subject lines, greetings, and sign-offs.

I also created a checklist of do's and don'ts for responsible social media use. While working on this task, I understood the importance of clear and respectful communication in both academic and professional settings.

Task 5 – Cybercrime Awareness

For the final task, I worked on a case study related to UPI payment fraud. The case study explained how such scams happen, who is usually targeted, and what the consequences are.

Along with the case study, I created a prevention checklist with practical steps to stay safe online. This task made me more aware of common cyber threats and the importance of being cautious while using digital platforms.

Conclusion

Overall, this project helped me understand the importance of digital literacy in everyday life. It provided practical exposure to tools and platforms that are commonly used by

students and professionals. I also learned about online safety and communication, which are essential skills in today's digital world.

This project served as a good starting point for building my digital presence and improving my awareness of responsible technology use.
